A photograph of a stone wall with a sign that reads "CLARA'S TUNNEL OF TERROR". The sign is made of large, blocky letters with a yellow-to-orange gradient and a dark outline. The wall is made of dark, irregular stones. In the background, a red, white, and blue striped flag is visible. The image is partially obscured by a yellow diagonal graphic element.

HAUNTED HOUSE PLASTIC SHEETING

FIRE RETARDANT • NFPA COMPLIANT • MADE IN USA

Put Safety First With Fire Retardant Sheeting

Halloween means endless opportunities to spook, delight and wow the community with your esteemed haunted house skills. But before you start drawing up plans for what's sure to be the envy of the neighborhood, it's important to know that even home-based haunted houses are considered special amusement buildings under the NFPA 1 fire code and may require special permits or be subject to strict fire safety requirements.

By sticking with Americover, you can be sure your materials are fire retardant and compliant with all relevant guidelines, including NFPA 701, ASTM E84 and Title 19 of the California Code of Regulations.

Not All Plastic Sheeting is Created Equal

While store-bought garbage bags might seem like an easy solution for your Halloween decor, they can easily burn, melt and drip in a fire, causing flames to spread rapidly. Fire retardant plastic from Americover is self-extinguishing, slowing the spread of fire and minimizing burn damage.

Flame Resistant Does Not Equal Fire Retardant

It's easy to confuse the terms "fire proof" or "flame resistant" with "fire retardant"—but they are not the same. Using fire retardant plastic sheeting increases public safety and prevents the risk of failing a fire inspection—and having to shut down the display you've worked so hard to build. Americover's haunted house plastic comes with a fire certificate to make inspections a breeze.

Your One-Stop-Shop for a Safe & Spooky Halloween
